

PROJECT PLANNER

DATE: 2024/06/7

MONDAY JUNE 10TH:

plan out the code, required for the calendar button. For example, functions, collection systems, etc

TUESDAY JUNE 11TH:

take action on the code both Beno and Ugbad

WEDNESDAY JUNE 12TH:

make another version and run some tests
division: beno (basic), ugbad (slightly advanced)
update files on google classroom

THURSDAY 13TH, MEETING DAY:

have at least two versions of running code available, obtain working hours from client to incorporate in the calendar and take any notes they might have

FRIDAY JUNE 14TH:

start working on the final version with client's notes in mind

SATURDAY JUNE 15TH:

try adding a mandatory filed function to the code so that it is unsubmitable without having filled out the required fields.

TO-DO LISTS:

- fix calendar button to dropdown a menu of client's business hours
- fix submit button
- add confirmation page
- email all the information stored in the array or any compatible collection system to recipients

WHAT TO HAVE READY BY NEXT MEETING:

a full running version of the site having the client's notes in mind.

CLIENT'S NOTES

- approved basic layout
- make it more aesthetically pleasing, add main colours of white, green and blue
- add their hours of operation into the page
- add their logo
- required filed addition if possible as they don't want to contact the client if the right information isn't provided.
